

Serial No.: 09/975,027

Docket No.: 48617.0200

Amendments To Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (currently amended) A method for facilitating the transmission and display of medical images, via a server and a network, the method comprising:
 - acquiring and digitizing said medical images using an acquiring device;
 - transmitting said medical images to said server via said network;
 - assembling a web page, including said medical images, at said server;
 - transmitting said web page to an authorized user, wherein said authorized user inputs a unique identifier;
 - displaying a template on said web page, wherein said template comprises an image which said authorized user ~~may place on one or more~~ incorporates into at least one of said medical images; and,
 - facilitating real time interaction by a plurality of authorized users to place and manipulate said template and said medical images.
 - ~~displaying information associated with said template wherein said information includes at least one of vendor identifier, manufacturer identifier, part name, part number, procurement information, cost, description, indication of use, and instruction for use.~~
2. (original) The method of claim 1, further comprising:
 - providing a list of templates; and
 - allowing said authorized user to select said at least one template from said list of templates.
3. (original) The method of claim 1, wherein said template includes at least one image of a medical device.
4. (previously presented) The method of claim 2, wherein said list of templates includes at least two different sizes of a same medical device.
5. (original) The method of claim 1, further comprising enabling said authorized user to move said at least one template to a plurality of locations on a viewing device.

Serial No.: 09/975,027
Docket No.: 48617.0200

6. (currently amended) The method of claim 1, further comprising enabling said authorized user to move said at least one of said ~~one or more~~ medical images to a plurality of locations on a viewing device.
7. (currently amended) The method of claim 1, further comprising allowing said authorized user to choose whether said at least one template ~~will have~~ includes at least one of a black ~~or~~ and white color.
8. (currently amended) The method of claim 1, further comprising allowing said authorized user to adjust the gamma correction for said at least one of said ~~one or more~~ images.
9. (currently amended) The method of claim 1, further comprising enabling said authorized user to manipulate ~~one or more~~ display characteristics of said at least one of said ~~one or more~~ medical images.
10. (currently amended) The method of claim 9, wherein said ~~one or more~~ display characteristics include at least one of contrast, gamma settings, image magnification, image size reduction and image rotation.
11. (original) The method of claim 1, further comprising allowing said authorized user to access a database of information while viewing said medical images.
12. (original) The method of claim 11, wherein said information includes general medical information and patient information.
13. (currently amended) A method for facilitating the transmission and display of medical images, via a server and a network, the method comprising:
 - acquiring and digitizing said medical images using an acquiring device;
 - transmitting said medical images to said server via said network;
 - assembling a web page, including said medical images, at said server;
 - transmitting said web page to an authorized user, wherein said authorized user inputs a unique identifier;
 - allowing said authorized user to place two connected lines on ~~one or more of~~ at least one of said medical images;
 - measuring an angle formed by the junction of said two connected lines; and

Serial No.: 09/975,027
Docket No.: 48617.0200

displaying said measurement of said angle to said authorized user;
displaying a template on said web page according to said measurement,
wherein said template comprises an image which said authorized user ~~may place on one or more~~ incorporates into at least one of said medical images; and,
facilitating real time interaction by a plurality of authorized users to place and manipulate said template and said medical images.

~~displaying information associated with said template wherein said information includes at least one of vendor identifier, manufacturer identifier, part name, part number, procurement information, cost, description, indication of use, and instruction for use.~~

14. (currently amended) A method for facilitating the transmission and display of medical images, via a server and a network, the method comprising:

acquiring and digitizing said medical images using an acquiring device;
transmitting said medical images to said server via said network;
assembling a web page, including said medical images, at said server;
transmitting said web page to a first authorized user, wherein said first authorized user inputs a first unique identifier;
transmitting said web page to a second authorized user, wherein said second authorized user inputs a second unique identifier;
displaying a message area;
accepting ~~one or more~~ messages input by said at least one of said first authorized user and said second authorized user; ~~and~~
displaying said ~~one or more~~ messages in said message area; ~~and~~
facilitating real time interaction by said first and said second authorized users to place and manipulate said template and said medical images.

15. (original) The method of claim 14, further comprising displaying a list including the names of said first and second authorized users.

16. (original) The method of claim 14, further comprising storing said messages on said server.

17. (currently amended) A method for facilitating the transmission and display of medical images for viewing, via a server and a network, the method comprising:

Serial No.: 09/975,027

Docket No.: 48617.0200

receiving said medical images on said server from at least one ~~one or more~~ uploading locations;

storing said medical images on said server;

accepting a log-on request from a user to log onto said server, wherein said log-on request includes inputting a unique identifier;

accepting a viewing request from said user to view at least one of said medical images;

determining, based on said unique identifier and said viewing request, whether said user is authorized to view said at least one of said medical images;

displaying said at least one of the said medical images to said authorized user, based on said determining step and said viewing request;

facilitating real time interaction by a plurality of authorized users to place and manipulate said template and said medical images;

allowing said plurality of authorized users user to place at least one template on said at least one of said medical images, ~~wherein said template includes at least one of a vendor identifier, manufacturer identifier, part name, part number, procurement information, cost, description, indication of use, and instruction for use;~~

allowing said plurality of authorized users to move said at least one template to ~~move said at least one template to~~ another location on said at least one ~~or~~ of said medical images;

accepting a message ~~one or more messages~~ from said authorized user;

displaying said message ~~one or more messages~~; and

displaying said ~~at least one of said~~ medical images, said at least one template and said message ~~one or more messages to a second authorized user~~ to said plurality of authorized users.

18. (currently amended) A system for facilitating the display of medical images, comprising:
- a server for receiving said medical images from ~~one or more~~ an uploading site;
 - a processor for processing requests of ~~one or more users~~ a plurality of users to log onto said server and view said medical images;

Serial No.: 09/975,027
Docket No.: 48617.0200

a database for storing ~~at least one~~ a template, wherein said ~~at least one~~ template is configured to be displayed with ~~one or more of~~ said medical images; and, for storing information associated with said template ~~wherein said information includes at least one of vendor identifier, manufacturer identifier, part name, part number, procurement information, cost, description, indication of use, and instruction for use;~~ and,

a network for delivering said medical images, said template and said information to said ~~one or more users~~, plurality of users and to facilitate real time interaction by said plurality of users to place and manipulate said template and said medical images.

19. (original) The system of claim 18, wherein said server is further configured to store said medical images.

20. (currently amended) The system of claim 18, wherein said processor comprises:

a storage module for storing unique user identifiers;

an comparison module for comparing said stored unique user identifiers with input unique user identifiers input by users; and

an authorization module for analyzing results from said comparison module and at least one of authorizing or denying user log-on requests based on said results.

21. (original) The system of claim 18, further comprising a second database for storing general medical information and patient information.
